Total OCI Score

Foa, E.B., Kozak, M.J., Salkovskis, P.M., Coles, M.E., and Amir, N. (1998). The validation of a new obsessive-compulsive disorder scale: The Obsessive-Compulsive Inventory. *Psychological Assessment* 10(3), 202-214.

The Obsessive Compulsive Inventory (OCI) was developed to help determine the severity of obsessive compulsive disorder (OCD). The scale's copyright and is reproduced here with the permission of the authors.

The OCI consists of 42 items composing 7 subscales: Washing, Checking, Ordering, Obsessing (i.e. having obsessional thoughts), Hoarding, and Mentally Reviewing. Each item is rated on a 5 (0-4) scale of symptom distress.

Each score is presented as a mean out of a possible maximum of 42. Total scores are between 0 and 42. A total score of 42 or more, or a mean score of 2.5 or more in any of the subscales suggests the presence of OCD, but is not diagnostic.

This form does not transmit any information about your assessment scores. If you wish to keep your results, either print this document or save this file locally. In this document, the results are intended as a guide to your health and are presented for educational purposes only. They are not intended to be used for clinical diagnosis. If you are concerned in any way about your health, please consult with a qualified health professional.
